## CSE111 Programming Language - II

Marks:30 Time:1h30mins

**Question 01:** Design the class **Monster** so the code provides the following output:

```
Driver Code:
                                Output:
#You are not allowed to change
                                _____
anything below:
                                Name: Godzilla
                               Hitpoint: 80
                                Alive: True
godzilla =
                               Name: King Kong
Monster("Godzilla",80)
                                Hitpoint: 60
kingkong = Monster("King
                                Alive: True
Kong", 60)
                                Name: Doge
doge = Monster("Doge", 100)
                               Hitpoint: 100
print("========"
                               Alive: True
                                _____
print(godzilla.monsterDetails()
                                No one to attack.
                                Attack successful. Godzilla defeated
print(kingkong.monsterDetails()
                                King Kong
                               Name: King Kong
print(doge.monsterDetails())
                               Hitpoint: 60
print("======="")
                                Alive: False
godzilla.monsterAttack()
                                _____
godzilla.monsterAttack(kingkong
                                King Kong is not alive to attack.
                                Attack unsuccessful. Godzilla was
print(kingkong.monsterDetails()
                                defeated by Doge
                                Can't attack. King Kong is not alive.
print("======
kingkong.monsterAttack(doge)
godzilla.monsterAttack(doge)
doge.monsterAttack(kingkong)
```

## **Question 2:** Write a class BracBook that inherits Social and design it so it provides the following output.

```
class Social:
    activity = ['Like', 'Comment', 'Share']

def __init__(self,name,email):
    self.name = name
    self.email = email

def details(self):
    return "Name: "+self.name+"\nEmail: "+self.email
```

Driver Code	Output		
<pre>print('====================================</pre>	Navid has Like(d/ed) a post.  Name: Navid  Email: navid@xyz.com  Phone: Not Set  Activites: Like  Name: David  Email: david@abc.com  Phone: 017xxxxxxx  Activites: No activites found  Create activity not found.  David has Comment(d/ed) a post.  Navid has Share(d/ed) a post.  Navid has Share(d/ed) a post.  Name: Navid  Email: navid@xyz.com  Phone: Not Set  Activites: Like, Share  Name: David  Email: david@abc.com  Phone: 017xxxxxxxx  Activites: Comment
